## Investing basics: The foundation of your investing future

Whether you are just starting out or have passed through many of life's major financial milestones, it is never too early or too late to consider how to invest your money to prepare for the next Snapshot of Life Events, which come with a new set of financial decisions to be made.

The very definition of "financial literacy", in fact, sets out the reasons why you and your family will want to work together with your financial advisors, to cover all the bases you need to, in anticipation of life's changes:

Financial literacy means you have "the knowledge, skills and confidence to make responsible financial decisions".

Making those decisions together with your financial advisors bolsters your opportunities to reach the objectives you need and want to make.

### Knowledge

An understanding of the personal issues you will face and the broader financial matters that will relate to them.

### Skills

The ability to apply your financial knowledge to the everyday decisions you would like to make.

### Confidence

The self-assurance to make important financial decisions for you and your family.

**Getting started.** In this guide, we will help you get on track to financial literacy to help you to meet your investing goals and objectives.

When arming (or re-arming) yourself with the investing basics, be sure to think about the questions you need to ask your financial advisors in order to build, preserve and extend your wealth.

<sup>1</sup> <https://www.canada.ca/en/financial-consumer-agency/programs/financial-literacy/financial-literacy-history.html>

## Section 1

### Should I save or invest my money?

#### Saving vs. Investing

The simple answer is both! To meet your short- and long- term financial goals successfully, you'll need to know the difference. Let's break each one down.

**Saving money** is the process of putting cold, hard cash aside and parking it in safe and liquid savings accounts (meaning they can be sold or accessed in a very short amount of time). The money you save first is usually to pay for short-term financial goals such as a vacation or putting aside an emergency fund for any unexpected expense or loss of income.

**Investing money** is the process of using your money to buy an [asset](#) or financial securities that you think have a good chance of producing an income in the future or can be sold at a higher price later for a profit. Investing your money typically requires a longer-term perspective to realize the potential benefits: a real return on your investment that complements your goals to build, preserve and extend your wealth into the future.

#### Budgeting to “pay yourself first”

The idea behind “paying yourself first” is a simple but powerful savings tool that can help you meet your short- and long-term financial goals. Also known as “reverse budgeting”, it involves treating your budgeted savings goal like any other bill. You assign it a value and place that money in a savings or investment account each month as soon as you receive your paycheck. After that, you pay your fixed monthly expenses. Anything left over can be spent on discretionary purchases without putting your savings goals at risk.

Your advisor can discuss your needs with you and help you discover ways to meet them with financial planning steps to get you there.

“The journey of a thousand miles begins with one step.” – Lao Tzu

**What financial goals should I make in the short term, and the long term? What plans need to be made to meet those goals?**

## Inflation and why it matters

Inflation is a sustained increase in prices over a particular period of time. A dollar today buys a lot less than a dollar did 20 years ago: the purchasing power of a dollar has decreased. To combat this decrease in value, you can invest your money in assets or securities that have a high probability of increasing in value over time.

For instance, if inflation is 3% in a 1-year period, the purchasing power of \$100 would be reduced to \$97. However, if you had invested that \$100 in a mutual fund over that 1-year period and the value had grown by 10%, your \$100 would be worth \$110. After inflation you would still have \$107. Investing can help guard against the impact of inflation over time.

**\$100**

1 Year, 3% inflation

**Value = \$97**

You lose \$3

## Section 2

### Why should I invest my money?

As you can see, *Investing Matters*. If you want to shore up the value of your savings for the future, there are only two ways to do it. You can continue to generate income by working – either for yourself or someone else. You can also have your savings work for you, to increase the value of your efforts. That becomes increasingly important when planning for specific life events: Parenthood, Losing a Job, Retirement or Disability, for example.

Investors grow their money in a variety of ways: by earning interest on their savings or by buying assets that increase in value or that pay part of their profits to shareholders as dividends. In fact, if you don't invest you are at risk of losing money over time thanks to taxes, inflation, and fees.

### The case for investing

The best way to stay ahead of inflation, earn income for retirement, and meet your future spending needs is to grow your money by investing.

#### 1. Investing to create wealth

Many investors use a three-step formula for building wealth: earn more money than you spend, limit debt, and invest your savings wisely.

In its simplest form, wealth is created by spending less than you make and using this extra money to invest for your future goals and needs. Sounds simple right? Well, it can be if you take a disciplined and proactive approach to setting aside some of your money now for the sole purpose of using it to make more money over time.

Discuss needs

Why should I invest sooner rather than later?

## 2. Value of money

The [time value of money](#) is an important reason why you should invest sooner rather than later. A dollar invested today has greater value now than it will in the future if *it has the potential to earn investment income* and therefore increase in value. As discussed above, if you put \$100 in a cookie jar and then take it out in a year of 3% inflation, you would only be able to buy \$97 worth of goods or services compared to a year ago. But, if you had invested that money instead, you have a better chance of maintaining the purchasing power of the original \$100 over time, if you make at least a 3% return on that investment, after taxes and fees.

### You have built wealth:

When the value of your assets is greater than the debt you owe.

### Invest sooner

### 3. The magic of compound growth

Albert Einstein described compound interest as the “the most powerful force in the universe.”

Here’s why: when an initial sum of money earns interest, over time, that interest, reinvested, also earns interest. It is growth earning growth!

Let’s say you have \$500 to invest now; you are going to invest another \$100 per week for the next 30 years and you expect to earn 5% interest on your investments annually. In 30 years, your total investment will be worth \$356,043. And more than half of that amount (\$199,543) is interest. This is the magic of compound growth!

Compound interest is the eighth wonder of the world. He who understands it, earns it ... he who doesn’t... pays it.” – Albert Einstein

## Section 3

### How should I invest my money?

Knowing when and how to invest your money is one of the most common questions new investors have. The good news is that there are basic rules to help guide you to a successful outcome.

#### Financial success

Set goals

Understand risk to your returns

Invest strategically

### Key principles of successful investing

Successful investors have a few things in common. They know what they are trying to achieve with their investments, how risk affects the return they can get, and how to invest their money strategically to increase the likelihood of realizing their goals.

#### 1. Setting financial goals

Now that you know why you should invest, it is time for you to spend a little time exploring what your money values and investment goals are. This is important to guide you to determine which investments are best suited to helping you reach your goals.

What are your financial goals? Ask your advisor to help you.

Goals guide  
decision-making

Investment  
selections matter

#### 2. Consider risk vs. reward

All investments carry some amount of risk, and it is important that you understand what these risks are before you choose a particular investment. In general, it is expected that higher risk investments should produce higher investment returns. For instance, T-Bills are considered virtually risk-free as they are backed by the government. If you had purchased and held onto \$1,000 worth of T-Bills in 1960, you would have \$8,474 today. However, if you had instead invested that money in US stocks, your investment would be worth \$421,079.

Do you understand the relationship between risk and return?  
Ask your advisor to explain this to you.

It is important to note that your ability to reach your investment goals depends on several factors such as the amount invested, length of time invested, [rate of return](#), fees, taxes, and inflation. If you can't accept much risk in your investments, then you will likely earn a lower return.

Amount  
invested

Time  
invested

% Return

Taxes, fees

Once you determine why you are investing and understand the risks associated with each type of investment, you can then focus on how to invest.

Discuss these strategies with your advisor, to get better results:

### 3. Invest often: dollar-cost averaging (DCA)

One of the challenges of investing in higher return stocks is knowing when to buy or sell them. There can be significant changes in the price of a stock from one day to the next. Changes in price is called [volatility](#) and can sometimes dramatically affect the value of your investment.

One strategy that can help minimize the effects of market volatility is to systematically invest a fixed amount of money regularly to buy investments which have a changing price. This is known as [dollar-cost averaging](#) (DCA).

Some investors think that the only way to invest is by having a large lump sum available. With DCA, you can invest smaller amounts over a longer period. This also provides the additional benefit of buying investments at different prices so that when the prices are low you acquire more and when the prices are high you acquire less. This helps protect you against price fluctuations and keep you invested.

### 4. Manage your risk with asset allocation

Asset allocation involves dividing your investment portfolio among different asset categories, such as stocks, bonds, and cash. The decision on how much to invest in each [asset class](#) is a personal one and is determined by your risk tolerance, goals and investment [time horizon](#). By including asset categories with investment returns that move up and down under different market conditions within a portfolio, you can protect against significant losses.

Since different investments will perform differently over time, it is very important that you monitor your holdings and periodically rebalance your portfolio back to your target allocation.

For instance, if you had a target of 40% equities and those holdings are growing in value, you could find that they are now worth 45% of your portfolio. In this case, you would want to sell 5% of your equity holdings and reallocate it to the other asset classes. Typically this is done on a quarterly or an annual basis.

Discover financial picture

Meet with your advisor to discuss your financial picture at least annually.

## 5. Spread it around – diversification

This strategy involves spreading your money among various investments in the hope that if one investment loses money, the other investments will more than make up for those losses. While asset allocation focuses on choosing different asset classes, [diversification](#) means choosing different investments within an asset class.

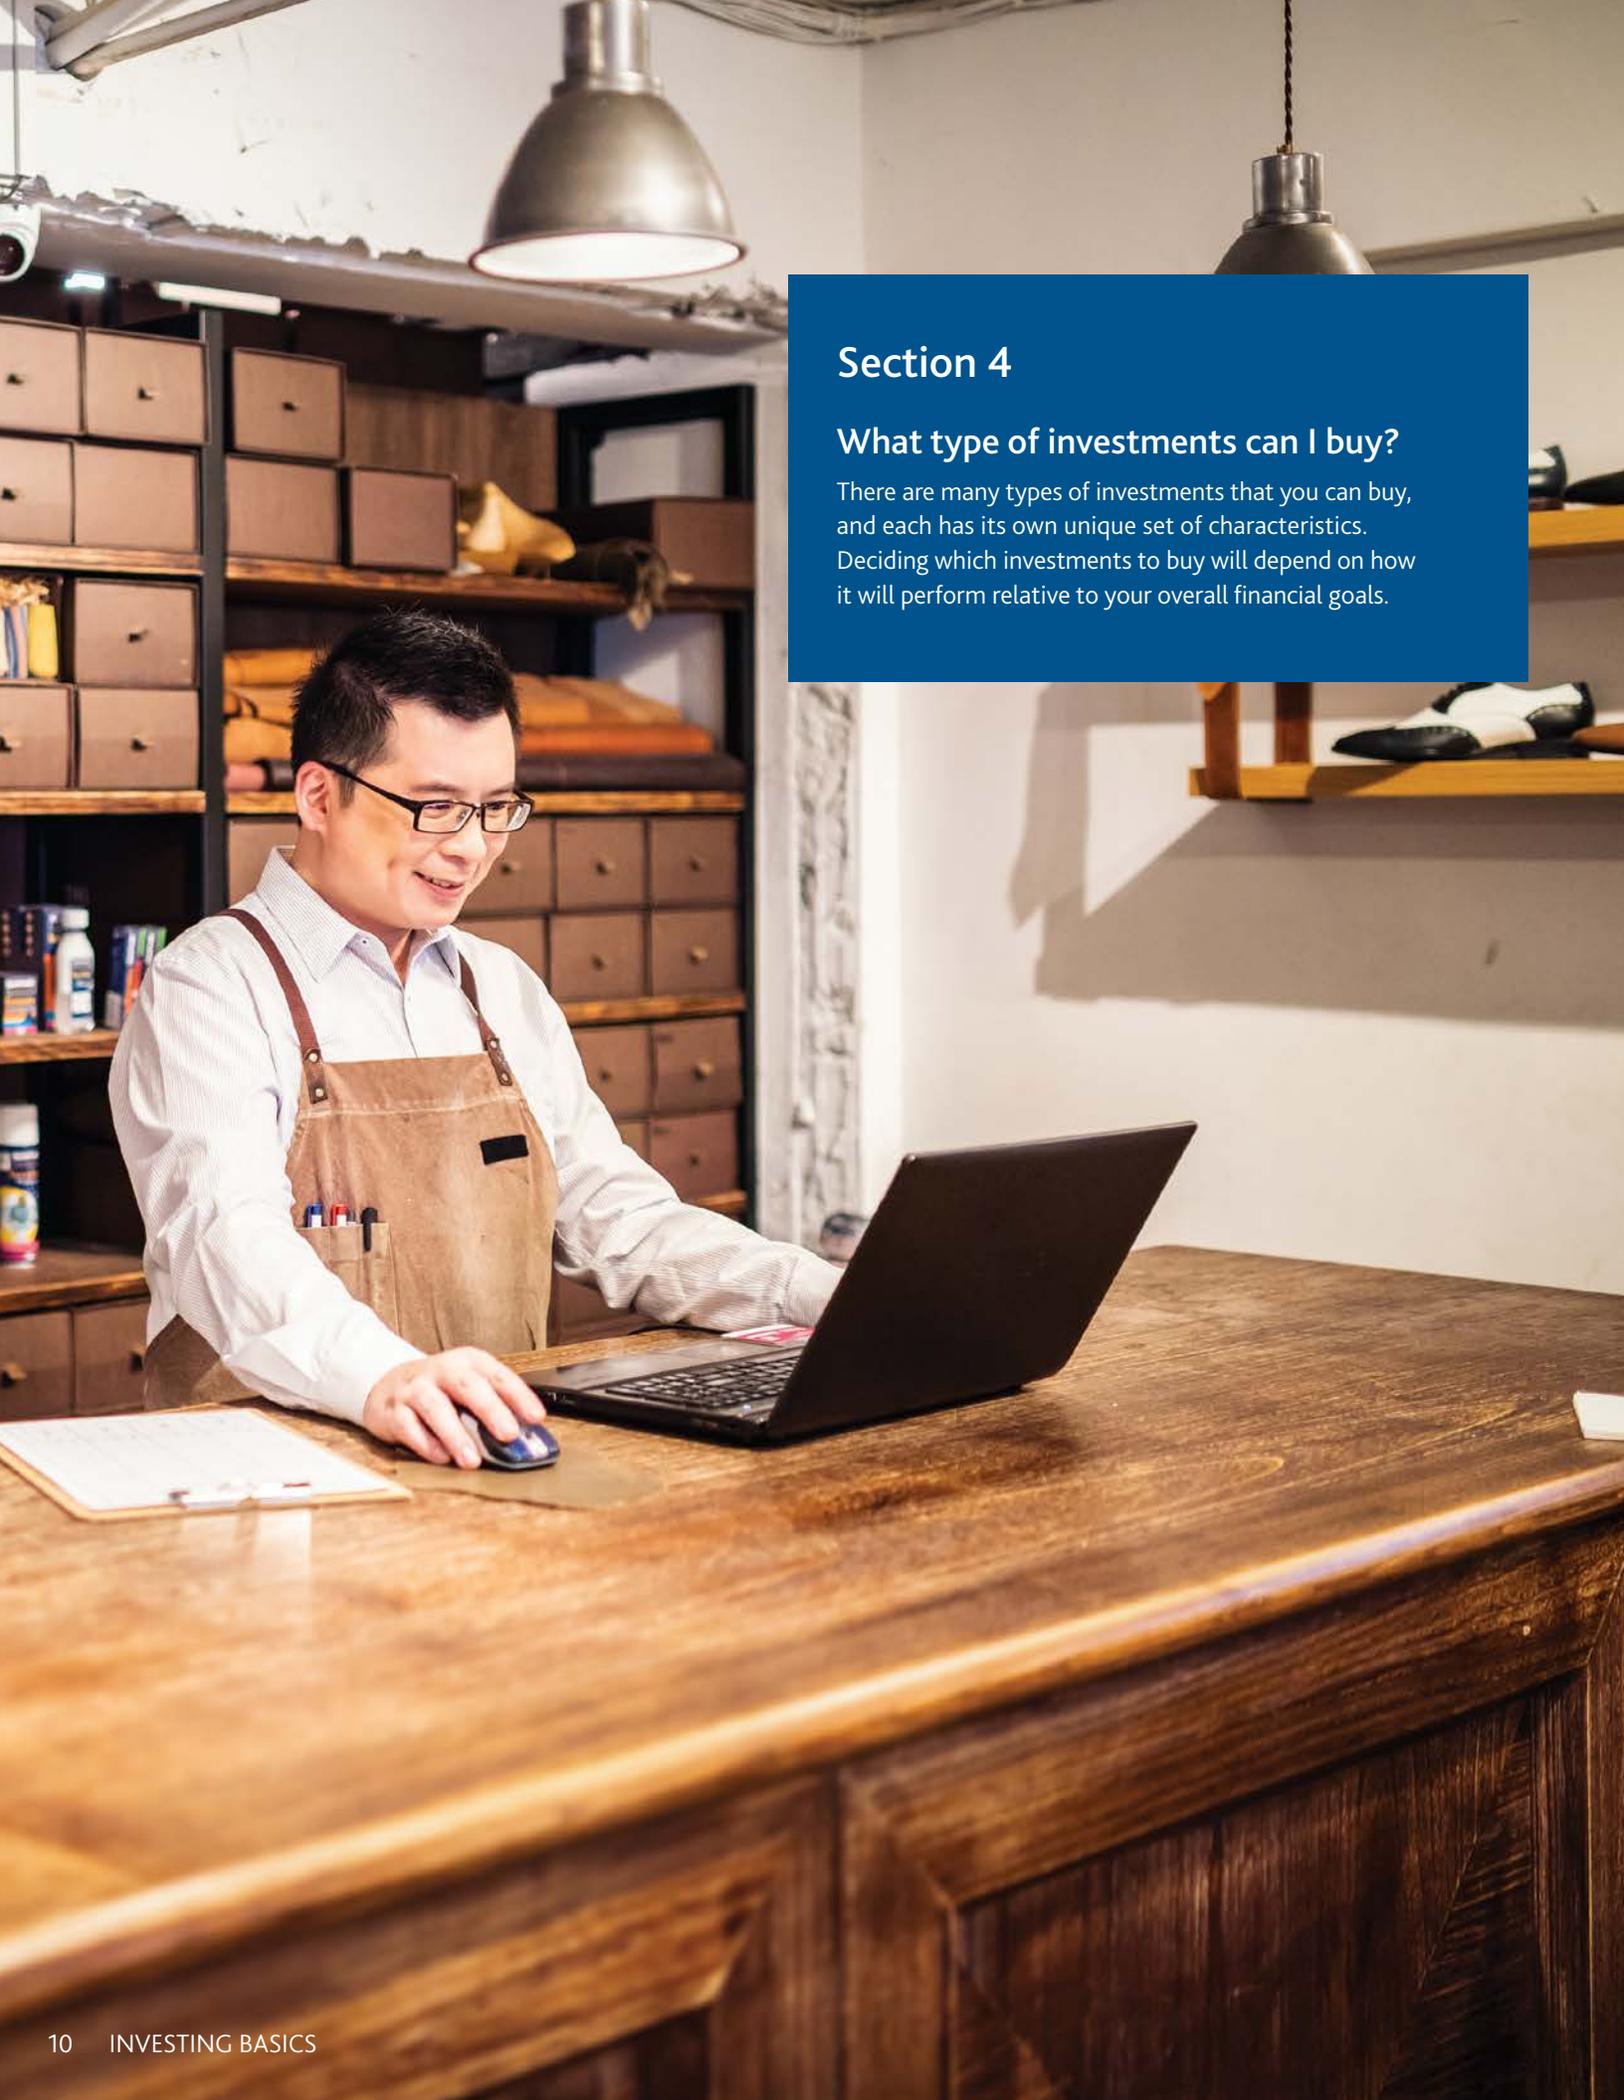

An example of this would be if your target asset allocation was to own 10% of Canadian equities, you may choose to buy shares of both a major Canadian bank and a major Canadian phone company. The idea here is that if one stock were to perform poorly the other may be performing better, which would offset the loss of the poor performer.

You can diversify your investment portfolio by *choosing different types of investments* (e.g., stocks, bonds, term deposits, real estate), choosing different companies or industries, and by choosing investments in different geographical areas (e.g., Canadian, United States, international).

Worried about losses?

Diversify within an asset class.

## Section 4

### What type of investments can I buy?

There are many types of investments that you can buy, and each has its own unique set of characteristics. Deciding which investments to buy will depend on how it will perform relative to your overall financial goals.

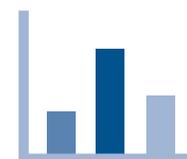

## Knowing your investment options

In order to understand where to invest your money, it is important you understand the different types of investments available and the types of return you can expect from them. There are six main types of investment asset classes you can invest in.

### 1. Equities or stocks

Equities or stocks are shares of ownership issued by publicly traded companies. They are traded on stock exchanges such as the [Toronto Stock Exchange \(TSX\)](#) in Canada or the National Association of Securities Dealers Automated Quotations (NASDAQ) in the US. You can potentially profit from owning equities either through a rise in the share price (capital appreciation) or by receiving dividends. Equities are considered higher risk investments as share prices can change dramatically over time and there is a risk of losing your money.

Equities

### 2. Bonds or fixed income

Bonds or fixed income investments pay investors a [rate of return](#) in the form of fixed interest payments until the investment's [maturity date](#). At maturity investors are repaid the [principal](#) amount they had invested. Government and corporate bonds are the most common types of fixed-income products. Such investments are generally considered less risky than investing in equities or other asset classes.

Bonds

### 3. Cash or cash equivalents

Cash or cash equivalents are highly secure financial assets that are liquid, i.e. can be readily converted into cash, such as [high-interest savings accounts](#), short-term [Guaranteed Investment Certificate \(GICs\)](#), [Treasury Bills \(T-Bills\)](#), and other debt instruments with less than a year to maturity. These investments can either be purchased at a discount to their future value or pay fixed [interest](#) payments over a specified period of time.

Cash

### 4. Cryptocurrencies

Cryptocurrency is a global digital currency created using computer algorithms. They are based on a decentralized, peer-to-peer (P2P) network and stored electronically. It can be used to buy goods and services but there is no legal tender that can be exchanged.

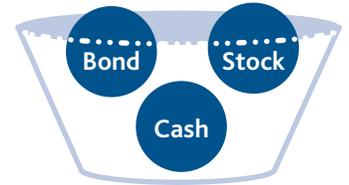

Cryptocurrency is known for high returns and high volatility. You cannot purchase and hold this currency in a registered account. The Canada Revenue Agency (CRA) requires that you report any gains or losses you realize, which will be taxed as either business income or capital gains.

Cryptocurrencies

Each of the investment types described above can be purchased and owned directly by you. The only limit to your ownership is the amount you can afford and how much you choose to invest in each. For example, if you have \$100 to invest and you would like to purchase shares in XYZ Corp., and they are trading for \$5 per share, you can purchase 20 shares (not including the cost to purchase the shares).

However, there are also investment vehicles that provide you with an opportunity to own a “basket” of these investments and can potentially provide you with access to a wider array of investment holdings. Let’s look at these in more detail.

## 5. Mutual funds

A mutual fund is an investment security that enables people to pool their money together into one professionally managed investment. Mutual funds can invest in stocks, bonds, cash or a combination of those assets. The underlying security types, called holdings, combine to form one mutual fund, also called a portfolio. It is important to note that you do not own the actual underlying securities, **you own units** (or shares) of the mutual fund but still participate in the growth (or loss) of the holdings collectively. Owning mutual funds offers you several advantages such as:

- a) Simplicity – investment experts manage the holdings for you
- b) Diversity – owns a variety of investments to reduce risk
- c) Versatility – gain access to almost any market segment
- d) Accessibility – low minimum investment required

Invest in units of stocks, bonds, cash or combination

## 6. Exchange-traded funds (ETFs)

An ETF is a type of investment security that tracks an underlying benchmark index, such as the [Toronto Stock Exchange \(TSX\)](#). ETFs are baskets of securities that have multiple stocks, bonds, and other assets, or sometimes even just one asset like gold. ETFs are similar to mutual funds in that you do not own the underlying stock. However, unlike mutual funds, ETFs trade like stocks, meaning that you buy and sell shares of an ETF on an exchange similar to a stock.

ETFs trade like stocks

[Explore more: See the glossary of helpful links](#)

Both mutual funds and ETFs can be either actively or passively managed, which can affect the rate of return you receive.

Active

With actively managed funds the portfolio manager will often buy and sell the holdings in an attempt to get a better return than a specific [benchmark](#).

Passive

With a passively managed fund, the portfolio manager will only buy and sell holdings to match the benchmark it tracks to.

Which is better for you to reach your goals? Your advisor can explain.

## Section 5

### How and when do I earn investment income?

#### Inside or outside of a registered account?

There are several factors to consider when choosing an appropriate investment account for your investments.

One of the biggest factors to consider when choosing which account to hold your investment(s) will be what the tax benefit or liability will be. Understanding the way your investment income will be taxed can guide you.

Ask your advisor to help you explore the factors to consider when choosing which account to invest in.

#### Taxable events – non-registered accounts

These accounts are not tax sheltered but are also not limited by the amount you can contribute or withdraw. You will sometimes hear these referred to as cash accounts although you can hold most investment types in them.

When considering what type of investments to hold in these accounts, you should consider the tax treatment of the investment income generated. For instance, [interest](#)-paying investments are 100% taxable and therefore should be sheltered in a registered account when possible. Capital gains are taxed at 50% and so investments that are expected to grow in value may be good choices to hold in a non-registered account.

There are four main categories of taxable events that can be triggered by your investments. These are:

##### 1. Interest

Interest paid on an investment such as a bond is 100% taxable as income at your [marginal tax rate](#).

##### 2. Dividends (eligible and ineligible)

When [dividends](#) are paid to you from an investment in a Canadian company they are “grossed-up” for the purpose of calculating tax and a corresponding tax credit is issued lowering the income tax you must pay.

##### 3. Capital gains/losses

When you sell an investment, you may have either a capital gain (you receive more than you paid for it) or a capital loss (you receive less than you paid for it) and 50% of this gain or loss is included in your taxable income.

##### 4. Foreign property

If you receive interest, dividends or capital gains from investments outside of Canada, you must report this income in Canadian dollars on your tax return.

It is important that you report all sources of income on your annual tax return. There are many qualified tax specialists who can help you with this.

- Interest
- Dividends
- Capital gains
- Foreign income
- Other income

## Taxable events – registered accounts

These accounts are government-sponsored and tax-sheltered. You can hold a wide range of investments in these accounts like equities, fixed-income, mutual funds and ETFs among others. The income generated in these accounts is not taxable until it is withdrawn. Since paying tax on your investment income will lower your overall wealth, it is worth taking advantage of these accounts to grow your investments in a tax-free way.

The main types of registered accounts available to you are:

### 1. Registered Retirement Savings Plan (RRSP)

Anyone with [earned income](#) can open an RRSP and contribute to it until the age of 71. Here are three compelling reasons to invest in these accounts: you will receive a tax deduction for your contributions, the earnings generated by your investments are tax-sheltered and you do not have to pay tax until you withdraw the money. That is a great way to maximize the time value of money.

### 2. Registered Retirement Income Fund (RRIF)

Once you turn 71, you must close your RRSP and either take a lump sum payment of the proceeds and pay the related taxes, purchase an [annuity](#) or convert the account to an RRIF. If you choose to open an RRIF account, you must take out a minimum amount per year, which is taxable at your marginal tax rate at the time of withdrawal.

### 3. Tax-Free Savings Account (TFSA)

TFSA's were first made available by the Canadian government in 2009. Anyone who is 18 years of age can open a TFSA and contribute up to the prescribed maximum per year. Contributions are not tax-deductible, but investment income generated in the account is not taxable and you can withdraw your money at any time tax-free. For 2021, the annual contribution limit is \$6,000. If you have never contributed to a TFSA, you could deposit a total of \$75,500 in this tax-free investment account.

### 4. Registered Education Savings Plan (RESP)

You can save for your child's post-secondary education in an RESP account up to a lifetime maximum of \$50,000 and be eligible for up to \$7,200 of government contributions in the form of grants or bonds. Once your child starts taking payments from the account, it is taxable at your child's tax rate.

### 5. Registered Disability Savings Plan (RDSP)

If you or your dependents have a disability and have qualified for the [Disability Tax Credit \(DTC\)](#), you can contribute up to a maximum of \$200,000 to help pay for the additional costs associated with the disability. Before the disabled person is 49 years of age, the plan may be eligible for government grants and bonds and by age 60 they must start taking payments from the plan.

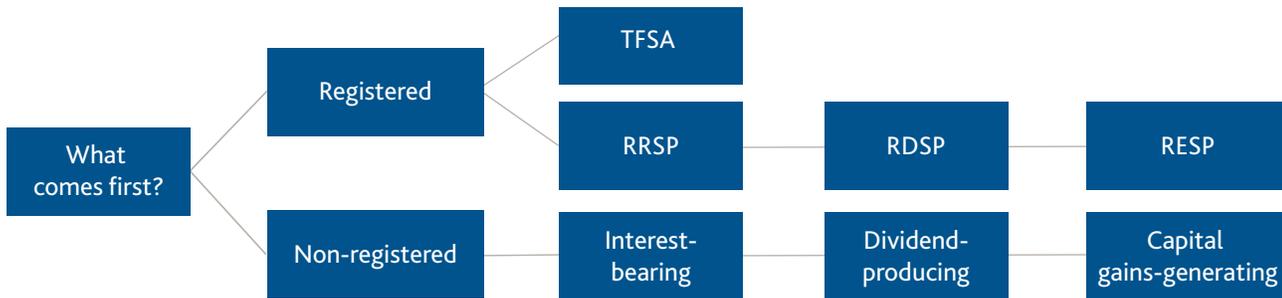

## Section 6

### What should I do first? Order of investing

If you are new to investing or have a limited amount of savings and/or cash flow available to invest, the type of account you choose to invest in can make a difference in your long-term wealth creation. There are several factors to take into consideration when evaluating which account type to invest in. Factors to consider include:

- Your [marginal tax rate](#) now and what you anticipate it will be in retirement
- The types of assets you will be investing in
- The nature of the returns you expect (interest income, dividends, capital gains)
- The amount you plan to invest and your investing purpose (retirement savings, short-term project funding, child's education fund)
- Whether you have available contribution room in your registered accounts
- Any age limits for the account, if applicable

Should you invest in an RRSP, TFSA or non-registered account?

Your advisor can help you make sound investment decisions based on your goals.

## Section 7

### How do I start investing?

Now that you have a better understanding of the why, what, where and how of investing, it is time to get started! Depending on your comfort level and your investing preferences, you may choose to manage your own investment plan, or you may prefer to work with a licensed professional.

There are two key considerations that should drive your decision: the cost of investing and the support and service provided by your advisor. In either case, it is important that you take your time and evaluate your options.

### Getting advice – working with a team of professionals

#### 1. Financial advisors

Working with a qualified financial advisor can be very beneficial to a new investor. Depending on their training and registration, they can advise you on a range of investment options that may be suitable for you. There are many different types of advisors, so you will want to understand the different products they can sell, the services they provide and the fees they charge. In order to protect yourself, it is also important that you check their registration to be sure they are licensed to sell you the products they recommend and that no disciplinary actions have been taken against them.

#### Financial Advice

- Services
- Products
- Fees
- License

#### 2. Accountants/tax specialists

Whether your financial situation is simple or complicated, working with an accountant or tax specialist can help assure you that your hard-earned dollars are not going to be eaten away by unnecessary taxes. These professionals are experts in creating and maintaining audit proof financial records and can advise you on the tax treatment of various investment options you may be considering.

#### 3. Lawyers

There may be times when you will need the services of a lawyer to manage your financial affairs. They can draft agreements, review contracts, set up trusts, draft wills among other things. Typically, a lawyer will specialize in one or more areas of the law. Depending on the situation, you may find you need to work with a lawyer with the following legal expertise:

- [Real estate](#) – when buying or selling a home
- Family – when getting married or divorced
- Employment – when taking or leaving a job
- [Estate Planning](#) – when drafting a will, power of attorney or health directive

## Understanding fees

Over time the impact of fees on your investment returns can be significant, and it is important that you understand what fees you will incur when making investing decisions. The fees you may have to pay fall into the following categories:

### 1. Cost to buy or sell an investment

When buying or selling a stock or ETF, you may have to pay a [trading fee](#). In the case of a mutual fund, you may have to pay an upfront fee, which is usually a specified percentage of the amount you invest, or you may have to pay a fee when you redeem the fund.

### 2. Investment management fees

Mutual funds and ETFs charge a [Management Expense Ratio \(MER\)](#) within the fund to pay for the professional management of the fund's holdings. The fee is calculated as a percentage of the value of the holdings and is taken directly out of the fund, which reduces the overall return you receive. This fee varies based on the type of fund.

### 3. Financial advisor fees

Depending on the financial institution a financial advisor works with, there are several ways an advisor can be paid. Advisors may charge a commission for the purchase or sale of an investment and/or charge a percentage fee based on the value of the investments they advise you on. In some cases, an advisor may charge you a fixed price for services they provide such as creating a financial plan.

### 4. Administration fee for registered plans

Firms that administer registered accounts on your behalf will typically charge an annual fee to cover things such as reporting to CRA.

**Fees**

- Trading fees
- MERs
- Fees for advice
- Administration fees

## Section 8

### How do I measure my investing success?

“Remember that the stock market is manic depressive.” Warren Buffett

Your financial advisor is a professional who can help you define the right next steps for the Snapshots in your Financial Life. There are three key issues to consider in defining next steps:

#### 1. Understand personal and family net worth: A snapshot now, and projected

To measure your progress in making great investing decisions, it is important to be accountable to results, over time. The [personal and family net worth statement](#) provides you with a *Snapshot* of the results of your investment activities. Net worth increases when your assets increase in value, but also when your debts decrease.

Ask your financial advisor to provide you with a Personal and Family Net Worth Snapshot at least once a year. Some investors like to see this quarterly or twice a year – it’s your choice.

As important, ask your financial advisor to project forward to a “terminal net worth”; that is, what your net worth might be 10, 20, 50 years in the future given sound inflation and investment return rates. This will help you understand what your tax liability might be when there is a death in the family and make sound decisions about your insurance needs to restore net wealth, after taxes at death.

## Sample Net Worth Statement

Total assets	Less	Total debts	=	Net worth
<b>Financial assets</b>		<b>Short-term debt</b>		
Cash deposits		Credit card debt		
Registered accounts: RRSPs, RRIFs, RESPs, DPSPs, TFSAs		Tax debt		
Non-registered accounts: stocks, bonds, mutual funds, ETFs, crypto currency, etc.				
Other assets: mortgages, etc.				
<b>Non-financial assets</b>		<b>Long-term debt</b>		
<ul style="list-style-type: none"> <li>• Principal residence</li> <li>• Other real estate</li> <li>• Contents in real estate</li> <li>• Precious art, jewels, stamp or other collections</li> <li>• Cars, trucks</li> </ul>		<b>Mortgages:</b> Principal residence Other real estate		
<b>Non-financial assets</b>		<b>Business debt</b>		
<b>Equity in business</b>		<b>Total</b>		

Source: Knowledge Bureau

## 2. Tax efficiency – what matters is what you keep:

A second point of accountability is the financial results you achieve for your household after filing family tax returns. How much income you keep, after tax, matters in building wealth. There are two things to think about:

1. How can I keep more of my income, after tax, to save more money?
2. As I earn more, how much will I pay on the next investment dollar I make?

As your income rises, the “tax bite” rises, too. That’s because we have a “progressive” tax system: the more you earn, the more tax you pay, and the less you receive from social benefits like the [Canada Child Benefit \(CCB\)](#) or [GST/HST Credit](#). Saving inside a registered account like a TFSA and an RRSP can help you keep more income and benefits, after tax.

What kind of investment income you earn, outside a registered account, matters, too. You will note from the chart below that different income sources are taxed at various [tax rates](#).

Pension, employment and interest income sources are “ordinary income” taxed at the highest marginal rates – the rate of tax on the next dollar you earn. Capital gains attract the lowest tax rates. Note that indexation of tax brackets for inflation will change the taxable income ranges from year to year; various government budgets can also change tax rates applied to income.

Ask your advisor to keep you up to date on tax changes and how they will affect your investment returns, after tax. You'll want to know combined federal/provincial rates. Your province of residence for tax purposes is where you reside as of December 31.

### Sample Federal and Provincial Marginal Tax Rates on Income

Province	Taxable income range	Ordinary income	Capital gains	Small bus. Corp. Div	Eligible div.
BC	Up to \$11,070	0%	0%	0%	0%
	\$11,071 to \$13,808	5.06%	2.53%	3.56%	-9.58%
	\$13,809 to \$42,184	20.06%	10.03%	10.43%	-9.60%
	\$42,185 to \$49,020	22.70%	11.35%	13.47%	-5.96%
	\$49,021 to \$84,369	28.20%	14.10%	19.79%	1.63%
	\$84,370 to \$96,866	31.00%	15.50%	23.01%	5.49%
	\$96,867 to \$98,040	32.79%	16.40%	25.07%	7.96%
	\$98,041 to \$117,623	38.29%	19.15%	31.39%	15.55%
	\$117,624 to \$151,978	40.70%	20.35%	34.17%	18.88%
	\$151,979 to \$159,483	44.02%	22.01%	37.99%	23.46%
	\$159,484 to \$216,511	46.12%	23.06%	40.40%	26.36%
	\$216,512 to \$222,420	49.80%	24.90%	44.63%	31.44%
Over \$222,420	53.50%	26.75%	48.89%	36.54%	

Source: Knowledge Bureau, 2021

### 3. Calculating investment returns: after taxes, inflation and fees

By asking your advisor to help you decipher how your investment returns are calculated after taxes, inflation and fees, like interest, investment fees, legal and accounting fees, you will then be better able to understand the "real return" on your investments over time. This will help you make more timely, confident, and responsible decisions about your next steps in building, preserving and extending wealth.

## Glossary of terms

**Accounts – non-registered:** These investment accounts earn investment income sources like interest, dividends, capital gains and foreign investment income that must be reported in your taxable income in the year the investment returns accrue, in the case of interest, or as the income is earned, in the case of the other investments.

**Accounts – registered:** These investment accounts provide income deferral opportunities; that is, the investment returns are sheltered from tax while the money is left in the account. Depending on the type of account, principal is invested on a pre-tax basis (example RRSP; a deduction is received when the money is invested), or after tax has been paid on the savings (example TFSA). Withdrawals are either taxable (RRSP and RRIF for example) or tax exempt (TFSA).

**Annuity:** A contract usually sold by life insurance companies that guarantees an income to you or your beneficiary at some time in the future. An annuity is a contract with a life insurance company. When you buy an annuity, you deposit a lump sum of money, and the insurance company agrees to pay you a guaranteed income for a set period of time – or for the rest of your life. Annuities are money commonly used to generate retirement income.

**Asset:** Something of value that a company or an individual owns or controls. Examples: buildings, equipment, property, a car, investments, or cash. Can also include patents, trademarks and other forms of intellectual property.

**Asset class:** A group of securities that have similar characteristics. Examples of asset classes include stocks, bonds, real estate or cash.

**Benchmark:** A yardstick that you can use to measure the performance of an investment. Example: a stock market index may be a benchmark you can use to compare how well your own stocks are doing.

**Canada Child Benefit (CCB):** Is a tax-free monthly payment available to eligible Canadian families to help with the cost of raising children.

**Capital appreciation:** How much your money, investments or other assets go up in value as time passes.

**Disability Tax Credit (DTC):** Is a non-refundable tax credit that helps persons with disabilities, or their supporting persons reduce the amount of income tax they may have to pay. An individual may claim the disability amount once they are eligible for the DTC. Learn more about how to claim the DTC [here](#).

**Diversification:** A way of spreading investment risk by choosing a mix of investments. The idea is that some investments will do well at times when others are not.

**Dividend:** Part of a company's profits that it pays to shareholders in proportion to the total number of shares held. The Board of Directors sets the amount. For common shares, the amount varies. It may skip dividends if business is poor, or the directors invest money in things like new equipment or buildings.

**Dollar-cost averaging:** A strategy where you try to reduce the cost of buying securities by spreading your purchases out over time. You buy a set amount of a security, such as a mutual fund, at regular intervals. In the end, you average out your cost per unit.

**Earned income for RRSP purposes:** Check your Notice of Assessment or Reassessment and your online profile with CRA to confirm your RRSP Contribution Room. It is based on "earned income" of the prior year and calculated by adding actively earned income sources like various employment income, royalties for work or inventions, net research grants or unemployment benefit plan or wage earner protection plan benefits received, qualifying income from an Amateur Athletic Trust, net income from a rental property or a business, taxable support payments (less any amounts repaid) less current year business or rental losses, deductible support payments and certain other provisions. To build your RRSP earned income, it is very important to file a tax return for every family member, even children with part-time earnings.

**Estate planning:** Is the act of preparing for the transfer of a person's wealth and assets after his or her death. Assets, life insurance, pensions, real estate, cars, personal belongings, and debts are all part of one's estate. [Learn more](#) about what is involved in estate planning.

**GST/HST credit:** Is a non-taxable amount paid four times a year to individuals and families with low and modest incomes to help offset the goods and services tax/harmonized sales tax (GST/HST) that they pay. Click this [link](#) to see if you are eligible.

**High-interest savings account:** A savings account that pays a higher rate of interest. Some rules apply. Examples: You may have to make a minimum deposit. You may have to do your banking by phone or Internet. You may also have to wait a couple of days to take money out.

**Inflation:** A rise in the cost of goods and services over a set period of time. This means a dollar can buy fewer goods over time. In most cases, inflation is measured by the Consumer Price Index.

**Interest rate:** A fee you pay to borrow money. Or a fee you get to lend it. Often shown as an annual percentage rate, like 5%. Examples: If you get a loan, you pay interest. If you buy a GIC, the bank pays you interest. It uses your money until you need it back.

**Guaranteed Investment Certificate (GIC):** An investment that works like a special kind of deposit. Most GICs pay you a set rate of interest for a set length of time. Some GICs base what you get on the performance of a benchmark such as a stock exchange index.

**Management Expense Ratio (MER):** Is how much it will cost you, year in and year out, to own any mutual fund, index fund, or ETF. It is a charge determined by how much of a fund's assets are used for administrative and other operating expenses. Find out more about the types of fees charged by clicking this [link](#).

**Marginal tax rate:** Is the rate at which an additional dollar of taxable income would be taxed. It is part of a progressive tax system, which applies different tax rates to different levels of income. As income rises, it is taxed at a higher rate (according to the marginal tax bracket it falls in). Click [here](#) to learn how to calculate your marginal tax rate.

**Maturity date:** The date when an investment becomes due. On that date, you get your money back without any penalty. Any interest payments stop.

**Personal net worth statement:** This document provides you with a Snapshot of investment results at a particular point in time by calculating the total financial and non-financial assets you have, including business equity and reducing this by short-term and long-term debt.

**Principal:** The total amount of money that you invest, or the total amount of money you owe on a debt.

**Rate of return:** The amount of money you make on an investment before expenses – this rate of return doesn't factor in expenses such as taxes, fees or inflation.

**Real estate:** Known as real property by the government of Canada, it includes all land, messuages, tenements of every nature and description and every estate or interest in real property whether legal or equitable. Learn more about investing in real estate by clicking [here](#).

**Registered Disability Savings Plan (RDSP):** This is a tax-sheltered investment account that allows for savings for a private pension for disabled family members, enhanced by government grants and bonds.

**Registered Education Savings Plan (RESP):** This is a tax-sheltered investment account that allows for savings for a private education account for children, enhanced by government grants and bonds. You can find more information on how RESPs work [here](#).

**Registered Retirement Income Fund (RRIF):** These tax-sheltered accounts hold matured RRSP deposits for those over age 71, providing a periodic pension income to the recipient. This income can be split with the spouse. To learn more about RRIFs, click [here](#).

**Registered Retirement Savings Plan (RRSP):** These tax-sheltered accounts provide a tax-deferred savings opportunities for those taxpayers who have earned income sources, in order to provide a periodic pension income later in life. It is possible to invest in a spousal RRSP with certain terms and conditions to be observed. An RRSP investment results in a tax deduction, which can significantly reduce taxes payable. However, upon withdrawal later in life, both the principal and the earnings are taxable when withdrawn from the RRSP, or after the matured RRSP is converted to an RRIF or annuity. [Here](#) is more information on how RRSPs work.

**Tax-Free Savings Account (TFSA):** This is a registered account that can be used by Canadian residents who are at least 18 years of age. It is subject to an annual maximum RRSP contribution room. There is no upper age limit, however. The main advantage is to save tax-free throughout one's lifetime – no tax is ever levied on investment earnings. It is a great place to save for emergencies or specific wants or needs. Funds withdrawn can be recontributed to the plan – and that includes the value of investment earnings. However, there are recontribution limitations; that is, investors must wait until the following calendar year to recontribute withdrawals. Learn the [TFSA basics](#).

**Tax rates:** The rate of federal and provincial income tax you need to pay on your income overall (effective tax rate) and how much tax you will pay on the next dollar you earn (marginal tax rate).

**Time horizon:** The length of time that you plan to hold an investment before you sell it. This may be a brief period of time or span as long as decades, depending on your financial goals.

**Time value of money:** Time value of money is the concept that a dollar today is worth more than a dollar tomorrow. A dollar earning a return today is more desirable than a dollar tomorrow as it may lose purchasing power due to inflation.

**Toronto Stock Exchange (TSX):** Canada's largest stock exchange, North America's third largest stock exchange, and the sixth largest in the world.

**Trading fee:** Trading fees apply when you want to buy or sell shares of a specific investment. Also called a commission, this fee is paid to an intermediary, such as a broker – dealer or a bank, for assisting in the sale or purchase of a security. [Learn more](#) about the fees for buying and selling stocks.

**Treasury Bill (T-Bill):** An investment where you lend money to the federal or a provincial government for a set period of time. It does not pay interest, but rather you buy T-Bills at a price below what the government will give you at the end of the term.

**Volatility:** The rate at which the price of a security increases or decreases for a given set of returns. A stock price that changes quickly and by a lot is more volatile. Volatility can be measured using standard deviation and beta.
